AB - The title rubbers are manufd. by transesterification of polyalkylene glycols (mol. wt. 400-30,000) with excess acid components in the presence of transesterification catalysts under an inert atm. at 180-240.degree., then treatment with diols at 170-230.degree. (mols of unreacted diols are equal or less than that of polyalkylene glycol), then polycondensation of the resulting prepolymers. Thus, 0.073 mol poly(tetramethylene) glycol (mol. wt. 3000) was treated with 1 mol di-Me terephthalate in the presence of Ti(Obu)<sub>4</sub> under a N atm. at 180-220.degree., then 1.3 mol 1,4-butanediol was added dropwise to the system for 60 min at 200.degree., then heated at 240.degree. and 1 torr for 180 min to give a block copolymer of (1:1) poly(butylene terephthalate) and polytetramethylene glycol showing modulus 800 kg/cm<sup>2</sup>, tensile strength 300 kg/cm<sup>2</sup>, and elongation at rupture 1000%.
